

the case management that you want, the freedom that you need

A Fresh Approach

KCics is the result of a collaboration between the Royal Borough of Kensington and Chelsea and the innovative software provider QES. It offers an innovative and flexible Munro ready children's services case management system and represents a leap forward for practitioner led solutions in children's public services.

The KCics Experience

The award winning **KCics** is a fully integrated flexible case management system that sets a new dynamic in the relationship between practitioners and technology.

First used in 2007 **KCics** gives practitioners the support and freedom to provide better outcomes for children and their families.

KCics features genuine practitioner led design incorporated with innovative new technology.

KCics provides a non prescriptive professional judgment based workflow within a secure, monitored environment.

KCics has been proven to have a positive impact on the time practitioners can spend doing face to face work with clients and eliminates unnecessary administrative burdens.

Our tailored workflow environment reflects local practices and effortlessly evolves to match new requirements and best practice.

KCics in your Authority

KCics is the original family centric solution and features innovative demographic active early duplication prevention.

KCics shows aliases, address history, genograms and features active background technologies bringing to the attention of practitioners potential dual recording of individuals through incorrect data entry, name changes etc.

KCics is provided by secure data integration specialists QES. The system features flexible yet highly secure data connection points for seamless integration into your wider data ecosystem. **KCics** remains integration agnostic and can integrate with new departmental systems as they are replaced, providing future proofing for your original investment.
